Ordinary XY calibration: $d = 4$, $\varepsilon/\pi = 1$, $N \geq 8$
Leading correction
REJECTED: $\chi^2/\mathrm{dof} = 1159.0/8$
Leading + subleading correction
REJECTED: $\chi^2/\mathrm{dof} = 1122.4/7$
N=8
N=10
N=12
N=16
$Q = \langle m^2 \rangle^2 / \langle m^4 \rangle$
(data − fit)/σ
β
Dots: paired-start measurements; vertical bars: 1 bootstrap SD. Dashed curves: saved joint fits.
Black rings: sampling-diagnostic flags. Residual shading: ±2 SD. These fits give no accepted critical coupling.
