3D spin dimension: common-coupling correlation-length quotients
ξ/L (bars: one bootstrap SD)
ε/π at β = 0
L=6
L=8
L=12
L=16
L=24
L=32
L=48
L=64
Δeff at common-ε crossing
L in the pair (L, 2L)
linear
pchip
Quotient bars: conditional MC 95%. Open: unresolved crossing. Interpolation/correction sensitivity is not a systematic error bar.
