Strong-negative response: size and initial-condition checks
κ = -4
κ = -8
κ = -16
Max spin Fourier power
Staggered nematic power
Vortex density
$|\kappa|(\varepsilon - \pi/2)$
Uniform
Unit winding
Canted sublattices
Vortex-rich parity-locked Z4
N=6
N=8
Independent trajectories at each coordinate. Lines guide the eye; no accepted critical line or asymptote.
Fourier maxima sampled every50cycles; finite-volume noise floor and trapping prevent precision claims.
