N=8: stronger-coupling tests of response alignment
Uniform, canted and Z4 starts: mean and range
Unit-winding starts, shown separately
Sampled max spin Fourier power
Staggered nematic power
Vortex density
$u = |\kappa|(\varepsilon - \pi/2)$
$u = |\kappa|(\varepsilon - \pi/2)$
κ=-4
κ=-8
κ=-16
κ=-32
κ=-64
Shading is the range across three initial-state classes, not a confidence interval. Lines guide the eye.
Finite-box response and persistent trapping; no equilibrium critical curve or fitted asymptote.
